

Our extensive design capability utilises the latest software such as, Pro-Engineer, Pro-Mechanica, AutoCad, Moldflow, Solidworks, and specialist gear design software provides customers with full product design as well as design for product verification. Project teams work alongside customers to either develop new products or re-engineer existing products.

A dedicated team of experienced engineers and designers is available to manage both new projects and supplier transition programs. QS procedures ensure total quality methodologies are adopted.

Utilising latest CAD, CAM and CNC machinery capabilities, CTP Davall offers both internal tool manufacturing and sub-contract tool management. In this way the group utilises the extensive range of precision tooling capabilities available within Carclo Technical Plastics.

We are a company where ideas take shape and where the impossible is routine. Our commitment to excellence is reflected in the recognition we receive from our customers.

We have the capability to add value to our customer's products using specialist knowledge of moulding and assembly. Early supply interface (ESI) can ensure our customers receive maximum support in the development of their products, therefore reducing costs in medium to long term. Extensive secondary operations capabilities are available, including ultrasonic welding, hotfoil pad printing, machine painting and assembly.
